

Wordpress

Cum instalez un certificat SSL pe un site ce ruleaza pe platforma Wordpress?

Accesati Admin-ul Wordpress apoi meniul **Setari** -> **Generale**, Modificati **Adresă WordPress (URL)** si **Adresă sit (URL)**, sa fie cu HTTPS.

In cazul in care aceste setari nu sunt suficiente creati un fisier **.htaccess** in directorul de instalare al wordpress cu urmatorul continut:

```
RewriteEngine On  
RewriteBase /  
RewriteCond %{ENV:HTTPS} !on [NC]  
RewriteRule (.*) https://%{HTTP_HOST}%{REQUEST_URI} [R=301,L]
```

In cazul in care fisierul **.htaccess** exista deja adaugati doar cele doua linii:

```
RewriteCond %{ENV:HTTPS} !on [NC]  
RewriteRule (.*) https://%{HTTP_HOST}%{REQUEST_URI} [R=301,L]
```

dupa linia **RewriteBase /**

Un exemplu ar fi:

```
# BEGIN WordPress
```

```
<IfModule mod_rewrite.c>  
RewriteEngine On  
RewriteBase /
```

```
RewriteCond %{ENV:HTTPS} !on [NC]  
RewriteRule (.*) https://%{HTTP_HOST}%{REQUEST_URI} [R=301,L]  
RewriteCond %{REQUEST_FILENAME} !-f  
RewriteCond %{REQUEST_FILENAME} !-d  
RewriteRule . /index.php [L]
```

```
</IfModule>
```

```
# END WordPress
```
